Product Information Sheet

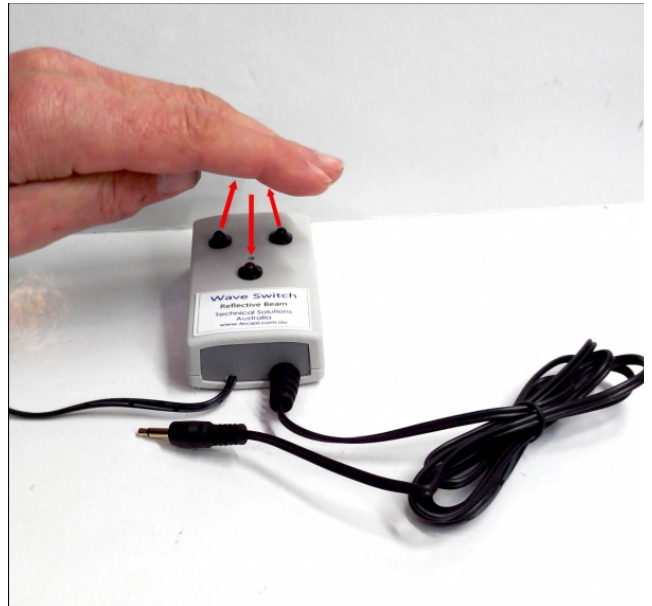

Wave Switch, reflective beam sensor

PART No. WAVESW

PRICE AUD

GST \$26.36

INQUIRY DATE 01 Nov 2024

An infrared light beam is reflected back to a sensor on the switch box any time you move your hand, or any body part, within about 5cm of the sensor. this will trigger the switch output.

This switch will suit a user who can move their hand at least 3cm, in and out of the beam area.

Gross movements can trigger the switch

No pressure is required

Little accuracy is needed as the reflective beam area covers about 3cm x 3cm

Audible 'click' feedback as well as visual red LED indicator of switch activation

The Wave Switch can be placed on its back so that it is activated by waving above it

The Wave Switch can be placed on its edge so that it is activated by waving beside it In this position the user could slide their hand across the table and not have to lift it to operate the switch

The Wave Switch can be mounted on and of our Switch Mounting Arms

The switch comes with a 9Volt plug pack power supply which must be plugged in to a power point.
